Hiring Manager

BlackBerry

Subject: Application for Intermediate Applications Software Developer

Dear Hiring Manager,

The opportunity at BlackBerry, specifically with Secusmart's focus on anti-eavesdropping solutions for critical agencies, aligns perfectly with my background in developing secure and impactful digital platforms. My hands-on experience in full-stack development, integrating third-party APIs, and enhancing cross-platform compatibility, as demonstrated with Olive Branch Mentorship Inc., prepares me to contribute to your mission of securing enterprise information and applications.

Your emphasis on working across mobile and desktop platforms, combined with a "hackathon mindset" and rapid prototyping, resonates strongly with my project experience. I developed MediTwin, an AI-driven health companion app, using Next.js, React, and Flask, and integrated the Google Gemini API to reduce manual drug research time by 40%. This project highlights my ability to leverage AI-enabled engineering tools and deliver practical, user-centric solutions.

My role as an Open Education Tech Project Assistant at Conestoga College involved developing and publishing 5+ Open Educational Resources, improving usability for over 1,000 students through HTML, CSS, and WordPress. This experience honed my ability to identify and resolve front-end and back-end issues, optimize content for engagement, and collaborate with diverse teams—skills directly applicable to contributing to architectural discussions and applying an empirical approach to development at BlackBerry.

Graduating in August 2026 with a Bachelor's in Computer Science, I am eager to contribute to a team that values innovation and impact. I am a self-starter who embraces ambiguity and continuous learning, qualities essential for thriving in your flat hierarchy and dynamic environment. My foundational understanding of OOP, algorithms, and debugging, combined with a generalist mindset comfortable with C, C++, Java, and C#, makes me a strong candidate to adapt quickly and deliver results.

Sincerely,

Girish Bhuteja
