Hiring Manager

D2L

Subject: Application for New Graduate Software Developer

Dear Hiring Manager,

D2L's mission to reshape learning through technology resonates directly with work I have already been doing - building Open Educational Resources used by over 1,000 students at Conestoga College. The chance to contribute to the platform side of educational technology, writing clean and maintainable code in C# and Java alongside product managers and designers, is exactly the kind of role I have been working toward.

At Conestoga, I developed and published 5+ OER modules using HTML, CSS, H5P, and WordPress, collaborating with subject matter experts to ship educational software on deadline. On the technical side, MediNet+, a hospital management system I built in C#, required designing a real-time client-server architecture using socket programming to support multiple simultaneous users - the kind of distributed systems thinking your role calls out. I have shipped production-quality code in C#, C++, and Java across multiple projects, with unit and integration testing throughout.

D2L's hybrid setup in Kitchener is a natural fit - I am finishing my Honours CS degree at Conestoga in Waterloo and available full-time from August 2026. I am ready to contribute from day one without a ramp-up on the local ecosystem or the domain.

I would welcome the chance to discuss how my background maps to what your team is building. Thank you for your consideration.

Sincerely,

Girish Bhuteja
